

# GLOBAL COLLABORATION

International Defense Partners +  
U.S. Government Labs and Universities

ADL Global Partnership Network  
[www.ADLnet.gov](http://www.ADLnet.gov)

## ADL GLOBAL PARTNERSHIP NETWORK

is a collection of government and academic organizations, working together to implement more effective, efficient, and interoperable technology-based training, education, and personnel development. Partnership members gain access to our community's software, specifications, science, and expertise. Members also have a unique opportunity to exchange the latest information and to broadly shape advanced distributed learning strategy across the world's scientific and practitioner communities.

## OBJECTIVES

### Exchange Information

Encourage open collaboration and exchange of lessons learned, best practices, and informational resources

### Promote a Shared Strategy

Develop and advocate for a common strategy for learning science and learning technologies, monitor emerging concepts, and continuously refine our shared vision

### Support Development, Testing, and Implementation

Foster a network that facilitates technology interoperability and enables technical development, testing, and implementation by sharing requirements, relevant use-cases, and development and implementation best practices

### Influence the Future

Encourage adoption of shared (ideally, open-source) software, content, standards, and specifications to better support widespread dissemination of learning content and interoperability of distributed learning technologies
